

ROADMAP

Let's make it easy, nowadays, noone likes fake promises and crazy roadmaps, so we're going to be 100% transparent.

Etherfaces is going to be a community based project

It's clear that our project's art isn't new, since it has been taken and renewed from Interfaces one, and that's beacuse we are a tribute collection. Their project cannot be compared with ours. We would like to add that we are not facing copyright issues as they did not register any trademark or officially made Opensea and every distinctive trait or logo as been renewed..

We really hope to get noticed from them and make them wake up again. Our aim is not to rob them, but to tribute them and show that their community is still alive.

We want to let you find friendly people which share your passions and that can fulfill your days and nights.

To cut to the chase: our aim is to bring our community voice, with 100% of the revenues coming from royalties and 80% from primary sales of Etherfaces (we will use the remaining 20% to pay the staff and mod team) we will develop our second project, and it's going to be much bigger

We chose to set the price at 0.006, it's a very low price, we want everyone to be able to afford an Etherfaces and set it as a profile picture.

All the holders of Etherfaces collection will be able to actively participate in ALL THE DECISIONS of the secondary project.

As soon as the development starts, we will ask you to choose everything, from the art, to the supply and price, to the sponsorship decisions, it will be **YOUR PROJECT**

When the Etherfaces sale will be over, we will communicate to the holders the way they can interact with us and make decisions and start this new journey.

LET'S BUILD SOMETHING BIG

This is just the beginning.
